Guide to Dementia Training for Health and Social Care Staff in London

1. Introduction

The needs of people with dementia, particularly in health and social care settings have been the focus of a great deal of work and development in recent years. This has been in response to the realisation that health and social care workforces have previously been ill equipped to support people with dementia, partially due to a lack of knowledge and understanding of dementia. The need to ensure that the workforce is educated in dementia care has been highlighted in numerous places - by the National Dementia Strategy, the National Audit of Dementia, the Counting the Cost Report, the Prime Minister’s Challenge and most recently, the G8 declaration. This has led to a proliferation of training opportunities and materials becoming available. The aim of this document is to provide organisations with guidance to support the identification and implementation of high quality dementia education for staff in both health and social care settings.

2. Tailoring training to your workforce

Dementia training is currently undergoing change and ranges from the principles of awareness used in the Alzheimer’s Society Dementia Friends session to the curriculum developed by Higher Education Dementia Network which takes training to a postgraduate level.

Three useful guidelines to identify core areas needing to be covered are Promoting Excellence (Scotland), the South-West Dementia Partnership Competency Framework and Skills for Health Core Competencies.

Dementia education for the health and social care workforce can be broadly divided into 3 tiers:

- Tier 1: Dementia Awareness (‘Essential information’) highlights the basic, essential competencies relevant to all sections of workforce and society. This could also form part of mandatory induction training for all health and social care staff.

**Tier 1 Dementia awareness is suitable for all staff working in health or social care; however, it does not provide sufficient information for staff who would be working regularly with people with dementia.**

- Tier 2: ‘Enhanced’ builds on Step 1 and highlights competencies needed for those working in general health or social care settings and for those working with people with dementia.
• Tier 2 Dementia training should be aimed at staff in general healthcare settings or who are in regular contact with people with dementia. It can also be seen as a starting point for staff who will develop more specialist knowledge.

• Tier 3: ‘Specialist’ builds on tiers 1 & 2 and is relevant to those working in a more specialist and intensive way with people with dementia.

  Tier 3 is aimed at staff who will be working extensively with people with dementia and who are likely to be in a specialist or a decision making capacity.

It is important to note that the use of the tiers is for guidance only and to provide a platform to demonstrate how dementia education can be tailored to the needs of your workforce. The tiers should not equate to seniority within an organisation. They should be used to identify what the staff need to know to deliver the most effective care to the person with dementia.

3. Content required for each tier

For the purpose of identifying which core subjects should be included in dementia training at the different levels, this document maps these subjects against core outcomes that would help support a person with dementia and their families along with care staff.

Central Principles
These should underpin all dementia training:

- Delivering service/care that is centred around the person with dementia
- Working in partnership with the person with dementia, family and carers
- Delivering services/care in a way which respects and maintains the dignity of the person with dementia
## Tier 1: Dementia Awareness Training

**Q: Can we use Alzheimer’s Society Dementia Friends Sessions as Tier 1 Awareness Training?**

**A:** Whilst Dementia Friends is a fantastic programme aimed at the general public, it is recommended that Tier 1 training has content which relates specifically to health and social care settings and how staff can support clients in this area.

*Examples of good Tier 1 Training are:*

**Barbara’s Story DVD Collection** – Guys & St Thomas’s Hospital  
Email: barbarasstory@gstt.nhs.uk  

**Dementia Awareness- Acute & Community** – Health Education North Central & East London & UCLPartners  

**SCIE Dementia Gateway**  
www.SCIE.org  

**E-Learning for Health**  
www.e-lfh.org.uk/
**Tier 2: Enhanced dementia training**

Recognise the presence of delirium and plan and deliver care to meet the person with delirium’s needs | Options for addition in clinical settings:  
Ethics  
Dementia drugs |
Q: How long should Tier 2 training take?

A: There is no set length of training for Tier 2. The most important issue is to ensure that it covers all the areas required. It is up to the individual organisation to decide what amount of time to allocate to each domain. This should reflect the focus of your organisation – for example, if you work in an outpatient setting, you might not need to allocate a large amount of time to nutrition, however, in a care home setting, this would require significant input.

One approach to Tier 2 is to break the subjects up and deliver them over several short sessions. This can make releasing staff easier. Materials which are particularly helpful for this are:

**NHS London Acute and Community Modules**

Email: Ruth.Evans9@nhs.net

**Barbara’s Story DVD Collection** – Guys & St Thomas’s Hospital

Email: barbarasstory@gstt.nhs.uk
Tier 3 Specialist Dementia Training

Tier 3 is Specialist Training designed to go into greater depth and aimed at staff who have already completed Tier 2 training.

To achieve Tier 3 Dementia Training, staff would be required to successfully complete a minimum of two modules of dementia training equating to 30 credits.

It is envisaged that this would be served by the Curriculum for UK Dementia Education produced by the Higher Education for Dementia Network (2013). The core subjects are outlined below:

Full Curriculum for Dementia Specific Programmes

1. Prevention and keeping well
2. Identification and assessment of dementia
3. Understanding the experience of and communicating with people with dementia
4. Creating effective partnerships with carers & families
5. Equality, diversity and inclusion in dementia care
6. Supporting people in the early stages of dementia
7. Developing person centred care, assessment and care planning
8. Holistic health for people with dementia
9. Supporting the daily life of people with dementia
10. Pharmacology relating to the needs of people with dementia
11. Psycho-social approaches for people with dementia
12. Key professional abilities and collaborative working
13. Understanding legal aspects of working with people with dementia
14. Understanding ethical issues in caring for people with dementia
15. End of life palliative care
16. Environment
17. Research, policy and service development in dementia care

Q: Where can I find Tier 3 Training Modules?

A: Tier 3 training will usually be found in colleges or universities. For information about courses see:

4. Delivery – face to face or e-learning?

There are high quality face to face and E-resources available for all levels of dementia training. As with all E-Learning materials, there is always a debate regarding what mode of delivery would be most effective. Below is a table outlining the pros and cons of each approach:

<table>
<thead>
<tr>
<th>Face to Face Training</th>
<th>E-Learning</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Pros</strong></td>
<td></td>
</tr>
<tr>
<td>Social Learning</td>
<td>Extensive resources available</td>
</tr>
<tr>
<td>Opportunity to ask questions</td>
<td>Can be free</td>
</tr>
<tr>
<td>Guaranteed presence in session</td>
<td>Can be done at learner’s speed</td>
</tr>
<tr>
<td>Is an effective way to change attitude</td>
<td>Can be done at any time</td>
</tr>
<tr>
<td>Able to evaluate whether learning</td>
<td>Can be done one by one – making it easier to</td>
</tr>
<tr>
<td>objectives have been achieved</td>
<td>release staff for training</td>
</tr>
<tr>
<td><strong>Cons</strong></td>
<td></td>
</tr>
<tr>
<td>Perceived as more time consuming</td>
<td>Difficult to ensure learning has taken place</td>
</tr>
<tr>
<td>Will incur a cost</td>
<td>No element of social learning in current</td>
</tr>
<tr>
<td></td>
<td>E-learning programmes</td>
</tr>
<tr>
<td>Requires resource (a trainer)</td>
<td>Participants will not be able to ask questions</td>
</tr>
<tr>
<td>Requires release of more than one</td>
<td>Staff can be distracted or be doing other</td>
</tr>
<tr>
<td>member of staff at a time</td>
<td>tasks simultaneously</td>
</tr>
<tr>
<td></td>
<td>Difficult to identify whether the staff have</td>
</tr>
<tr>
<td></td>
<td>understood the training</td>
</tr>
</tbody>
</table>

Each organisation needs to identify what it is they want to achieve through the delivery of the training (see Appendix 1) and decide on the best means of delivery for them. Some organisations have opted for combining e-learning and face to face. Good-quality free E-Learning Resources are identified below:

- Dementia Gateway [www.scie.org.uk](http://www.scie.org.uk)
- Gloucester PCT [www.kwango.com](http://www.kwango.com)

pageNumber=2

Note: Check how you can monitor learning if you are using e-learning – some websites do not record completion of the modules.
5. Accessing training

The first step when deciding to train staff is to identify what you are hoping to achieve through the training and then tailoring what is available to your plan. Use the planning template in Appendix 1 to help you.

The options available to each organisation are outlined below:

a) Access e-learning resources
   These can be used to provide training to the workforce. The extent and the subject matter of the training will be determined by what is available in the resources – which might limit on-going training options.

b) Train a trainer
   This model has proven to be very successful and cost effective in both acute and community settings. It would require an initial outlay for the course. It is important to identify the right person to undertake the training (be sure that the person is interested and willing to train) and then to support that person to deliver training to staff. The advantage of this is that the staff member is often enthused and will want to improve services as well as train others.

c) Commission dementia training
   There are numerous organisations which will deliver direct dementia training and many are excellent. However, there is currently no regulation of private providers so you do need to be confident that the training you commission is of an acceptable standard. It is also important to be certain that the content is right and fits both your staff’s education needs as well as the regulatory requirements for training.
   If using a private training provider, ensure that you have checked the quality of the training by ensuring the following:

   Get a reference from another customer
   Check what the trainer’s background is
   Is the trainer a dementia specialist?
   How long has the trainer been delivering dementia training?
   How does the trainer choose the content of the sessions?

Before commissioning training, consider the sustainability of this as you will have to retrain staff and also train new staff in dementia care as they arrive. Commissioned training can become expensive if you need to deliver an on-going education package. However, some organisations do opt to have a regular session with external training providers.

Local colleges and universities will also offer dementia training – these vary according to the organisation; however, they are well suited to provide Tier 3 programmes of study. Ensure that you check the content of any syllabus as
some more advanced training might be focussed on a specific aspect of dementia and might not fulfil your requirements.

Nurses and healthcare assistants can apply for grants to undertake courses through the Royal College of Nursing (see www.RCN.org)

d) Local provision

Before deciding on how to deliver your training, it is a good idea to contact both local education provider (such as Local Education and Training Board) and other local service providers, either health or social care and see if they are willing to work in partnership with you. This can be very cost effective and a great way of building relationships between different providers. Another organisation might also have access to existing training which will suit your needs. All healthcare organisations have a dementia lead and this is an ideal place to start investigating what is available.

6. Evaluating the impact of the training

Evaluating the impact of your training is from the onset has several advantages:

a) It will tell you if you are achieving your aims outlined in your plan
b) It will give you an idea of whether the training is good value for money
c) It will provide you with evidence for the regulators
d) It will inform you about where to focus training/information next.

You can evaluate the impact on several levels; depending on the size and structure of your organisation and what you choose to measure should relate to your plan and what you want to see as a result of the training.

Try where possible to align any informatics with existing data collection as this will reduce the workload for you. So, consider how you already measure quality of care in your organisation and see if these metrics can be aligned with your aims for dementia training. Examples of these might be: patient falls, reduced anti-psychotic prescribing etc.

As well as measuring impact on the patient care, it is also useful to measure impact on the individuals who receive the training. This will provide you with a seam of information about how they have reacted to the training, what attitude the person has and also what else the person is interested in learning about.

An effective qualitative evaluation of training would be the use of follow up...
sessions with staff to test the impact of receiving the training. This can however prove to be a resource intensive approach to evaluation.

Rather than using a standard feedback form, the use of a form with value statements as shown on page 11, is very effective. This form can be used as it is, or adapted for your own organisation.

To ensure that your evaluation has maximum impact ensure that you collect data before the training as well as after it. These comparisons can be effective evidence for change and proof that your training has been effective.
**Participant feedback form**

<table>
<thead>
