FOREWORD

On behalf of the Mental Health and Maternity Strategic Clinical Leadership Groups

Having a baby is a major life transition for all women, a joyful and exciting time for many and a very challenging period for others. Between 10 and 20% of women develop a mental health problem during pregnancy or within the first year after having a baby. Perinatal mental health problems are an important cause of maternal mortality and if untreated may not resolve for a long time and can have a devastating impact on both women and their families.

Mental disorders in the perinatal period include antenatal and postnatal depression, anxiety disorders including obsessive compulsive disorder and panic disorder, eating disorders, post-traumatic stress disorder, relapse of known severe mental illnesses including schizophrenia, schizoaffective disorder and bipolar affective disorder and postpartum psychosis. These conditions may develop insidiously or extremely suddenly during pregnancy and post-delivery. Post-partum psychosis and severe affective illnesses are particularly likely to occur close to delivery and are severe and sudden in their presentation, constituting a medical emergency. Perinatal mental health problems range from mild to extremely severe, requiring different pathways, management and care. However, if individuals prone to relapse and those who do develop an illness are identified early, it is possible to promote recovery in a timely way and mitigate many of the negative effects of perinatal mental health problems for women, their infants and their families.

The perinatal mental health care pathway in this document has been developed by senior practitioners within perinatal mental health services in London and sets out guidance on the key components required to develop and deliver perinatal mental health services that meet the needs of women and their families. It is concordant with NICE guidance (NICE APMH 2014) and the Perinatal Quality Network (PQN/CCQI) service standards.
The key to successful implementation of this pathway lies in the close integration of community perinatal mental health services and maternity provider based obstetric and midwifery leads. Given the complex geography of London, commissioners will play an important role in configuring these services and ensuring seamless integration.

The London mental health and maternity clinical strategic networks are very pleased to be able to endorse this care pathway. This pathway is an important tool that will support commissioners to improve perinatal care through enabling prevention, prediction, detection and treatment of perinatal mental health problems. Perinatal mental health provision needs to be comprehensive, accessible, equitable and available within a timely manner. This document sets out how this may be achieved to ensure that women and their families in London get the right treatment, from the right services at the right time.

INTRODUCTORY NOTES AND THEORETICAL FRAMEWORK

The Pan London Perinatal Mental Health Network

The Pan London Perinatal Mental Health Network was formed in 2013. It is a multidisciplinary network accountable to the Clinical Director of the London Mental Health Strategic Clinical Network (SCN). It oversees the North West, North East and South London Perinatal Mental Health Clinical Networks, which each have a chair and a co-chair.

The following initial priorities were set for the Network in 2013:
- To develop standardised Perinatal Mental Health Training for London
- To develop a Pan London MBU Admission Protocol
- To develop a London Perinatal Mental Health Care Pathway & standard protocols
- To undertake a Pan London Perinatal Mental Health Needs Assessment
- To develop a London Perinatal information sharing ‘Electronic Hub’

Consultation process and pathway development

The present document is the result of an extensive consultation exercise over a period of two years involving a wide range of stakeholders across maternity, health visiting, social care, psychology, psychotherapy, psychiatry, the third sector and service users. The views, opinions and experiences of the stakeholders were collated through regular meetings of the North West, North East and South London Perinatal Mental Health Clinical Network Meetings and through reporting to the Pan London Perinatal and Mental Health Strategic Clinical Networks. The authors have combined the views of the various stakeholders with the recommendations of all the relevant guidelines, policies and reports on perinatal mental health available at the time of writing.
• It is anticipated that the care pathway will be updated to incorporate any updates to existing guidance as well as newly launched professional guidelines and government policies.
• The aim is for this pathway to be on a website. If users click on boxes in the pathway additional, more detailed, information will be available. The first set of diagrams, outlining service line strands will lead to the more specific algorithms. An example is included of the algorithms for the perinatal psychiatric service line strand. Work needs to be completed for the other service line strands. Potentially, localised information about specific services and resources can be added in to make the pathways more specific to local boroughs.

Clinical Guidance and Perinatal Clinical Standards

• Perinatal Mental Health – Experiences of Women and Health Professionals - Boots Family Trust( 2013)

Background and explanatory notes

The Perinatal Mental Health Pathway (PMHP) presented in this document is designed on the principle that each London borough should have access to an accredited perinatal mental health service (PMHS) with capacity to consider referrals and to provide care at any reproductive stage, i.e. pre-conception, pregnancy, birth and up to 12 months postpartum.

The Royal College of Psychiatrist’s Perinatal Quality Network defines standards for community perinatal mental health services which will become part of an accreditation process. Standards are defined for the following areas:

- Access and referral
- Assessment
- Care plans
- Care and treatment
- Discharge
- Infant welfare and safeguarding
- Staffing and Training
- Recording and Audit
• The Royal College of Psychiatrists’s Perinatal Quality Network standards require that community perinatal mental health services be staffed as follows in order to be accredited as a good psychiatric service:
  o Consultant Perinatal Psychiatrist (Adult);
  o Non-consultant medical staff;
  o Perinatal community psychiatric nurses;
  o Social worker;
  o Clinical psychologist;
  o Nursery nurse;
  o Occupational therapist
  o Administrative and data entry support

• The Royal College of Psychiatrists (Council Report CR197 – July 2015) suggests staffing levels for specialised perinatal community mental health teams as follows:
  o The team must be led by an adult consultant perinatal psychiatrist (at least 1PA per 1000 births). This should be increased if there is no junior doctor support.
  o The team should have specialist perinatal mental health nurses (at least 0.5WTE for 1,000 births). Nurses should have caseloads of around 25 women each.

It is expected that the composition and the capacity of the workforce should be carefully tailored to the local needs of the geographical area and maternity service served by the perinatal mental health team.

• The Royal College of Psychiatrists’s Perinatal Quality Network Service Standards for Mother & Baby Units is associated with an accreditation process.

• The London Perinatal Network is mindful that perinatal mental health encompasses a wide range of disciplines – psychiatry, psychology, and psychotherapy – across both adult and early year’s services and that it should be fully integrated with maternity care and health visiting. Therefore, this care pathway incorporates five main interfacing strands: Maternity & Neonatology, Maternal Psychiatry, Maternal Psychological
Therapies, Infant Mental Health, Social Care and Health Visiting each with clearly defined professional, clinical and managerial service line accountability. The diagrammatic divide is a construct for ease of reference. In practice services may include aspects of more than one service line strand (e.g. a perinatal psychological therapies service may include psychological therapies for the mother as well as parent-infant psychotherapies; or one “perinatal mental health service” may include both the maternal mental health psychiatric and psychological therapies service line strands)

• The Maternity & Neonatology service line strand is expanded with a focus on integrating physical and mental health. The Social Care service line strand, is explored with a focus on the interface with perinatal mental health, when the needs/risks are contingent upon parental psychiatric illness. Health visiting is envisaged as an essential component of the care-pathway. Therefore it is expected that adequate health visiting and perinatal specialist health visiting provisions are ensured.

• The maternity service must factor in specialist provisions to facilitate integration of physical and mental health through joint clinical management, education, training and supervision and establishment of an adequate specialist workforce, namely mental health lead midwives and obstetricians. The partnership among the two services should take the form of robust regular training and education packages for midwives and obstetricians, joint and co-located obstetric psychiatric liaison clinics, joint management plans with active involvement of obstetric and midwifery teams for women with complex needs (e.g. medical complications in pregnancy) and/or severe and enduring mental illness.

• Each maternity unit should have a dedicated (i.e. with clinical sessions additionally funded) obstetric consultant as the Obstetric Perinatal Mental Health lead and at least one WTE specialist perinatal mental health midwife who will work closely with the child safeguarding midwife, the perinatal psychiatrist and specialist perinatal mental health nurses forming a
dedicated multi-professional team. The specialist perinatal mental health midwife role should be in addition to and not merged with the pre-existing child safeguarding midwife.

- The service line strands span through service tiers 1, 2, 3 & 4 according to the level of complexity and risk; some interventions are likely to overlap.

- It is expected that Perinatal Mental Health teams will have a multi- and inter-disciplinary composition and work philosophy. However, the clinical and managerial accountability should be in accordance with the relevant professional specialty, code of practice and clinical governance.

- Women referred to a PMHS may present with multiple risks at a variable level e.g. high psychiatric low obstetric risk; high mental health, high social but low psychiatric risk. The coordination of care should be led by the service or services managing the highest level of risk.

- Psychological therapies may be accessed either through the mother (Psychological Therapies strand) or through the infant (Infant Mental Health strand). Both routes of access should work with the mother and infant as a system, with an awareness of the forming attachment. Although access to these therapies has been categorised in separate strands, there is likely to be an overlap in the therapy implemented in both pathways.

- Psychological therapies should be delivered by practitioners with expertise and training in perinatal mental health. This is in order to provide optimum interventions for women, which also takes into account the baby and the developing attachment, to safely and effectively manage risk and to allow the interagency working necessary during the perinatal period. Where specialist perinatal psychological therapies are not available, therapies will be delivered by practitioners in generic adult mental health services. Although women in the perinatal period
are often prioritised by these services, the provision is unlikely to be as specialised.

- The care pathway for young people (<18 years old) is the same with the exception that the psychiatric care is led by a CAMHS consultant psychiatrist. Perinatal mental health services can work jointly with CAMHS services.

- It is expected that the relevant commissioning process across London reflects the composite multiagency nature of the PMHS care pathway coherently and that all the relevant CCGs contribute to the establishment of the services accordingly.

- It is anticipated that the final configuration and the level of investment required to bring perinatal mental health care pathways up to standard across London will be determined by the extent and sustainability of pre-existing service provision and local need.

**Principles of Care**

- Training and supervision should be available for all professionals and agencies involved in the care of pregnant and postnatal women with mental illness. **Practitioners with the relevant competencies and professional accreditations should deliver this training.**

- Professionals should work in partnership with women (and others she wishes to include: partner, family & carers).

- Service provision should be matched to the woman’s needs.

- All professionals should be sensitive to cultural needs.

- Advice and support should be offered to partners (and carers).

- Good communication and information sharing between all professionals, the woman (and partner and family, if she wishes to involve them) is essential.

- Information needs to be available for women, partners/family and professionals about: perinatal mental health services, mental disorders, treatments, voluntary sector services, other sources of information/support and advice.
• Professionals should consider risk at points of transition (e.g. to new midwife or GP, or move to new area). When women move to a new area or transfer their maternity care it is essential to ensure that all relevant information is shared appropriately with the professionals in the new area.
• It is important to ensure women who are homeless, those who move frequently and those who have no recourse to public funds, do not fall between services.
• There should be systems in place to ensure that if there is significant change (e.g. relapse; domestic violence; relationship breakdown) this is identified, communicated to all involved professionals and that a multiagency meeting is held if needed.
• Women with a primary substance misuse diagnosis should be referred to a substance misuse service. In pregnancy this should preferably be a specialist antenatal substance misuse service.
• Prescribers can access information on prescribing in pregnancy and breastfeeding from the following:
  o NICE Guideline for Antenatal and Postnatal Mental Health (2014)
  o UK Teratology Information Service (www.uktis.org)
• Psychological therapies services should prioritise women who are pregnant or in the first postnatal year.
• When many professionals are involved in a woman’s care, it is important to clarify professionals’ roles and clinical accountability.
• All professionals should consider the need for referral to Children and Young People’s Services (CYPS) for Safeguarding or Early Help.
• There should be a thorough review of previous mental health and CYPS records as part of the assessment by the relevant agencies.
**PERINATAL MENTAL HEALTH CARE PATHWAYS**: INTEGRATIVE INTERFACE WITH MATERNITY & NEONATOLOGY SERVICE LINE STRAND

**TIER 0**

- Midwifery (and neonatal nursing) training in mental health and referral pathways

**PRIMARY CARE TIER 1 & 2**

- MDT referral meeting
  - Perinatal Psychiatrist
  - Perinatal Mental Health Nurses
  - Mental Health Obstetric lead
  - Mental Health specialist midwife
  - Child Safeguarding midwife
  - Psychologist

- Antenatal and Psychiatric Clinics co-located in hospital and community settings.

- Cross disciplinary training placements for Obstetric, Psychiatry, and Psychology Trainees

- Joint Obstetric/Neonatal/Psychiatric Academic events

**SECONDARY CARE TIER 3**

- Weekly supervision of Mental Health Lead Midwife, Child Safeguarding Midwife and neonatal nurses
- Midwives to shadow specialist midwife and specialist perinatal psychiatric nurse to improve skills in detection and awareness of care pathways.

- Joint high risk obstetric-psychiatric clinics for women with Severe Mental Illness
- Multidisciplinary management of irrational fear of childbirth
- Pre-birth planning meeting
- Intrapartum care planning involving obstetric anaesthetist
- Joint review of maternity inpatients and multidisciplinary postnatal review and pre-discharge meetings for complex cases
Primary Care Liaison (based in GP surgery) – Psychiatric Nurses/Social Workers – triage and may hold low risk cases

Accredited Perinatal Mental Health Service, led by an adult Perinatal Psychiatrist, with capacity for community outreach, obstetric liaison, case management and coordination of admission to MBU when indicated.

The service offers ongoing advice, regular training and supervision to all tier 1,2,3 services, including midwives and health visitors.

The Perinatal Mental Health Team works in partnership with: Midwives (including Specialist Mental Health Midwife & Child Safeguarding Midwife); Obstetricians; Perinatal Mental Health Specialist Health Visitors; Social Workers (Children’s Social Care). Also with maternal mental health psychological therapies and infant mental health services where these services are separate from the perinatal mental health team.

Perinatal Psychiatric teams can work jointly with General Adult Mental Health Services, Drug & Alcohol services, General Liaison Psychiatry, Eating Disorders and Learning Disability services. Named perinatal mental health champions in these teams are responsible for liaising with perinatal psychiatry for preconception advice and at pregnancy recognition.

See detailed algorithms page 14-18
PERINATAL MENTAL HEALTH CARE PATHWAYS: MATERNAL MENTAL HEALTH-PSYCHOLOGICAL THERAPIES SERVICE LINE STRAND

Maternal Mental Health Psychological Therapies

- Recognition and referral by GP.
- Psychoeducation.
- Raising awareness in maternity services.
- Contributing to psychologically informed antenatal classes and care.
- Maternity counsellor.
- Perinatal Mental Health Midwife Perinatal Mental Health Specialist Health Visitor.
- Health Visitor: Listening Visits, groups, cognitive counselling
- Self-help material.

IAPT Step 2 with fast-tracking referral pathway
- Individual or group interventions e.g. anxiety management.
- On-line CBT modules.
- Guided self-help.
- Telephone intervention.
- Workshops.
- Counselling services in GP practices.

IAPT Step 3 with fast-tracking referral pathway offering evidence based individual (e.g. CBT or IPT) or group therapy (e.g. Milgrom’s CBT group therapy for postnatal depression).

Perinatal Psychological Therapies Service led by Consultant Clinical Psychologist (or Consultant Psychiatrist in Psychotherapy). Provides direct and indirect treatment including supervision of specialist psychological assessment, formulation and evidence based treatment plans for individuals, groups and couples. Rapid access to a range of approaches including CBT, DBT, family and psychodynamic psychotherapy adapted to the perinatal period. Provides and contributes to psychologically informed risk assessments.

The service also offers on going advice, regular training and supervision to all tier 1,2,3 services, including midwives, health visitors and IAPT

Perinatal Psychological Therapies within a Mother & Baby Unit

Perinatal Psychological therapists work in partnership with: Midwives (including Specialist Mental Health & Safeguarding Midwives), obstetricians, Health Visitors, Social Workers (Children and Families). Also with adult maternal mental health (psychiatric) service and parent-infant mental health service where these are separate services. Liaison with Psychological services to NICU & CAMHS.

Perinatal Psychological therapies services can work jointly with General Adult Mental Health, Drug & Alcohol, General Liaison Psychiatry, Eating Disorders and Learning Disability services. Named perinatal mental health champions in these teams are responsible for liaising with perinatal psychological therapist from pre-conception onwards where input is required.

TERTIARY CARE TIER 4

SECONDARY CARE TIER 3

PRIMARY CARE TIER 2

PRIMARY CARE TIER 1
**PERINATAL MENTAL HEALTH CARE PATHWAYS: PARENT - INFANT MENTAL HEALTH SERVICE LINE STRAND**

**TIER 0**
- Healthy Child Programme
- Children’s Centre programmes – e.g. infant massage groups, mother & baby groups, parenting classes.
- National Childbirth Trust Postnatal classes
- Brazelton approach/Neonatal behavioural assessment scales
- Peer support

**TIER 0 PIR-GAS scores**
- 91-100 Well Adapted
- 81-90 Adapted

**TIER 1**
- Family Nurse Partnership
- The Maternal Early Childhood Sustained Home-visiting program
- Circle of Security
- Parents Under Pressure
- Targeted Infant Massage
- Minding the Baby

**TIER 1 PIR-GAS scores**
- 71-80 Perturbed

**TIER 2**
- Video interactive Guidance
- Watch, Wait, Wonder
- Parent-infant Psychotherapy
- Systemic Couple and Family Therapy

**TIER 2 PIR-GAS scores**
- 61-70 Significantly perturbed
- 51-60 Distressed
- 41-50 Disturbed
- 31-40 Disordered

**TIER 3**
- Videofeedback for Positive Parenting (ViPP)
- ViPP-Sensitive discipline
- Mindfulness-based parenting
- Mentalisation-based parenting
- Cognitive Behavioural and Interpersonal Psychotherapy

**TIER 3 PIR-GAS scores**
- 21-30 Severely disordered
- 11-20 Grossly impaired
- 1-10 Maltreatment

**TIER 4**
- Specialist Residential and Day Mother & Baby Unit
- Multidisciplinary Parenting Assessment (funded by social care)

*See Appendix 1 for explanatory notes*
Level 1
1. Low Risk or Need
2. No Looked After responsibility
   Risk /need unlikely to escalate

Level 2
1. Moderate risk/need
2. Unlikely to escalate to high risk/need

Level 3
1. Moderate risk/need
2. May escalate to high risk/need
3. Legal duty to assess
4. Risk of Family Breakdown
5. Referred (but not assessed) more than 3 times in last 3 months or in the case of domestic violence, 3 referrals over any period.
6. More than 3 Assessments in the last 12 months

Level 4
1. High risk/need
2. Risk/actual significant harm
3. Partnership not established/accepted
4. Serious family dysfunction/breakdown/ collapsed family network
5. No person has parental responsibility or parent is prevented from exercising parental responsibility
6. Very challenging behaviour
7. Early response required
   Legal intervention possible

Social Care & Health Visiting
- On line directory of relevant agencies offering general supportive measures.
- Social Media: e.g. Netmums
- Universal interventions via children’s centres e.g. baby massage
- Generic Parenting Classes
- Family Nurse Partnership
- Befriending services offered by NGOs: e.g. Home Start.
- Health Visitors Listening Visits and signposting
  - Perinatal Mental Health Specialist Health Visitor.

4 Level Service Model
- Your Community
- Universal
- Universal Plus
- Universal Partnership Plus

5 Mandatory Elements
- Antenatal health Promoting Visits
- New baby review
- 6-8 weeks assessment
- 2 to 2 ½ years review

6 High Impact Areas
- Transition to parenthood and early years
- Maternal Perinatal Mental Health
- Breastfeeding
- Healthy weight (healthy diet and being active)
- Managing minor illnesses & reducing accidents
- Health, wellbeing & development at 2 years and support to be ready to school

Multidisciplinary Specialist Intervention
- Multidisciplinary Parenting Assessment Teams in residential or community settings
**MATERNAL MENTAL HEALTH - PERINATAL PSYCHIATRIC SERVICES: ALGORITHM FOR PRECONCEPTION ADVICE**

1. **Identify woman of childbearing age with active or in remission mental illness (e.g. by GP or by adult mental health perinatal champion or care-coordinator at CPA)**

2. **Discuss pregnancy planning and referral for preconception advice**

3. **Preconception counselling appointment with perinatal mental health service (1)**

4. **Information leaflets for all women and encourage discussion with GP**

   - **NOT severe mental illness***

5. **Severe mental illness***

   - **Preconception counselling appointment with perinatal mental health service (1)**

*SMI are schizophrenia, schizoaffective disorder, other psychoses, bipolar affective disorder, severe unipolar depression.*
MATERNAL MENTAL HEALTH PERINATAL PSYCHIATRIC SERVICES: ALGORITHM FOR PREGNANCY

Routine mental health screening questions at maternity booking (2)

Pregnant woman with current or past history of mental illness identified by any professional

Current or past history of severe mental illness (3)

Current or past history of mild / moderate mental illness

No mental illness – continue to ask about mental wellbeing during pregnancy & postnatally

To primary care pathway

Consider whether CAF needed (4)

Referral to accredited perinatal mental health service (5)

If urgent → A&E, general liaison psychiatry or adult mental health if perinatal team unable to assess

Refer for antenatal care if not done (If available specialist midwife/midwifery team and Consultant Obstetrician)

Perinatal team to check mental health records and/or request mental health history from GP

SMI criteria not met – inform GP/midwife/woman and give advice on alternative options

SMI criteria met

Assessment by perinatal team (6)

Refer back to primary care following assessment and advice

Ongoing care by perinatal mental health team (7) and circulate Perinatal Mental Health Care Plan (8)

If admission needed consider MBU after 32/40 weeks of pregnancy (10)

Pre-birth perinatal mental health planning meeting (by 32/40) (9)

Refer to maternal mental health psychological therapies/parent-infant psychotherapy

Review and update Perinatal Mental Health Care plan - copy to woman and all professionals (8)
**MATERNAL MENTAL HEALTH - PERINATAL PSYCHIATRIC SERVICES: ALGORITHM FOR DELIVERY**

<table>
<thead>
<tr>
<th>For women already known to perinatal mental health services:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Review of mental health by perinatal mental health professional on postnatal ward (or other mental health professional if no perinatal service).*</td>
</tr>
<tr>
<td>• Action perinatal mental health care plan.</td>
</tr>
<tr>
<td>• Ensure all involved professionals informed of delivery.</td>
</tr>
<tr>
<td>• Discharge planning meeting for complex cases.</td>
</tr>
<tr>
<td><strong>Urgent concerns during maternity admission:</strong> Follow hospital protocol for urgent assessment- Perinatal liaison / general liaison psychiatry</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>For women not previously known to perinatal mental health services where new mental health concerns identified:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• If severe mental illness: Review of mental health by perinatal mental health professional on postnatal ward (or other mental health professional if no perinatal service); agree plan and ensure relevant professionals informed.*</td>
</tr>
<tr>
<td>• If mild to moderate mental illness: Review by specialist mental health midwife</td>
</tr>
<tr>
<td><strong>Urgent concerns during maternity admission:</strong> Follow hospital protocol for urgent assessment- Perinatal liaison / general liaison psychiatry</td>
</tr>
</tbody>
</table>

**POSTNATAL PATHWAY**

**If admission needed** refer to MBU (10)

Refer back to primary care following assessment and advice

Refer to maternal mental health psychological therapies/parent-infant psychotherapy

* Homebirths – arrange mental health review asap
MATERNAL MENTAL HEALTH - PERINATAL PSYCHIATRIC SERVICES: ALGORITHM FOR THE POSTPARTUM

1. For women known to perinatal mental health services during antenatal period follow care plan
2. Pregnant woman with current or previous mental illness identified by any professional
   - If urgent concern refer to MBU (acute ward only if MBU criteria not met)
   - If urgent concern, same day assessment in A&E or CMHT if perinatal team unable to assess
   - Perinatal team to check mental health records and/or request mental health history from GP
3. Current or previous severe mental illness
4. Consider whether CAF needed
5. Referral to perinatal mental health service (or CMHT if no perinatal team)
6. Assessment by perinatal team
   - Ongoing care by perinatal mental health team in partnership with other services
   - Advise re local postnatal support e.g. Children’s Centre/Voluntary sector/ Websites
7. No mental illness – continue to ask about mental wellbeing
8. To primary care pathway
9. Following MBU discharge – review in community by perinatal mental health team within 7 days
10. Discharge to CMHT (or other mental health service) or GP

- SMI criteria not met – inform GP/midwife/woman and give advice on alternative options
- Refer back to primary care following assessment and advice
- Refer to maternal mental health psychological therapies/parent-infant psychotherapy
MATERNAL MENTAL HEALTH - PRIMARY CARE PATHWAY

**Routine mental health screening questions at maternity booking (2)**

- **Pregnant woman with current or previous mental illness identified by any professional**
  - Current or previous severe mental illness
    - Refer to perinatal mental health team
  - Current or previous mild / moderate mental illness
    - GP to assess mental health and inform midwives and HV of any concerns
      - No mental illness – continue to ask about mental wellbeing during pregnancy & postnatally

- **Pregnant woman with current or previous mental illness**
  - Routine mental health screening questions at maternity booking (2)

- ** maternity woman with current or previous mental illness**
  - Current or previous severe mental illness
    - Refer to perinatal mental health team
  - Current or previous mild / moderate mental illness
    - GP to assess mental health and inform midwives and HV of any concerns

- **Consider and complete CAF if needed**
  - if needed
  - Referral to IAPT
  - Wellbeing plan
  - Information and advice re voluntary sector and other resources including Family Nurse Partnership, local support services, and websites etc.
  - Continue to review mental health during pregnancy and postnatal period
  - Ongoing liaison between GP, HV, midwives and any other involved professionals

- **Prescribe medication (request advice from perinatal mental health team if needed)**

**If urgent concern**
- A&E or CMHT if perinatal team unable to assess

**To severe mental illness pathway**
Maternal Mental Health – Perinatal Psychiatric Services Algorithms – additional information

(When the pathways are on a website, clicking on the numbers within the boxes in the algorithm flowcharts will lead to the information listed for each number below)

1) Preconception counselling

Include in discussion:

- General health issues – including weight/ smoking/ drugs alcohol/folic acid
- Risks and benefits of medication in pregnancy
- Risk of relapse in pregnancy/postpartum
- Genetic risk
- Maternity and mental health care available locally
- Likelihood of involvement of Children’s Social Care
- Written information for women
- Clarify which women should be seen by perinatal mental health services

2) Mental health screening questions

- Add NICE APMH questions
  
  i. SMI questions – if YES refer to Perinatal Mental Health Service (or CMHT if no perinatal mental health service available)
  
  ii. Whooley questions – if YES – GP to assess → primary care or perinatal psychiatric service
  
  iii. Anxiety questions – if YES – GP to assess → primary care or perinatal psychiatric service

- Clarify: severity of disorder; current and previous treatment etc. Questions should to be asked for late bookers / women who have had no antenatal care.

3) Definition of SMI

Severe mental illness includes Schizophrenia, Schizoaffective Disorder, other psychoses, Bipolar Affective Disorder and Severe Unipolar Depression.

4) Criteria for CAF

5) Criteria for referral to perinatal mental health services (or CMHT)

- Add information about London Perinatal Mental Health Services and contact details
- Women with current or previous severe mental illness, including Schizophrenia, Bipolar Disorder, Postpartum Psychosis, other psychotic disorders, severe affective disorder, severe anxiety disorders e.g. Post Traumatic Stress Disorder, Obsessive Compulsive Disorder, personality disorder.
- Women who are pregnant or up to 6 months postpartum with follow-up to 12 months.
- Women over 18 years old
- Women under 18 years can be referred if perinatal psychiatric disorder dominates the picture and care is joint with CAMHS
A clinical member of the team is available to discuss urgent referrals during working hours.

Women currently in the care of psychiatric services should be referred. Assessment, advice and treatment should be in collaboration with the woman’s usual psychiatric team.

6) What to include in initial perinatal mental health assessment

Before assessment
- Written acknowledgement sent to women whose referral is accepted within 2 weeks of receipt of the referral, giving proposed actions.
- Send woman information about the service
- Copy appointment letter to GP and midwife (and CMHT care co-ordinator if there is one)
- Women are offered choice of where they would like their assessment to take place, taking into consideration clinical need.
- Pregnant women receiving mood stabiliser medication should be discussed with the referrer and their usual psychiatrist within 2 working days and appropriate advice given
- Thorough review of previous mental health clinical records

Timing of assessment (these timings may be subject to change with the publication of the National Perinatal Access and Waiting Time targets)
- Non-urgent referrals seen within 6 weeks
- Pregnant women receiving mood stabiliser medication should be offered an appointment that is within the two weeks after referral.
- Women referred with new onset conditions after 28 weeks of pregnancy and within 6 weeks of delivery should be discussed with the referrer within 5 working days and appropriate advice given.
- Women referred with new onset conditions after 28 weeks of pregnancy and within 6 weeks of delivery should be offered an assessment appointment that takes place within the 2 weeks after the referral.
- Women referred before 28 weeks of pregnancy, should be seen no later than this point in their pregnancy or within 2 weeks.

At assessment
- Thorough review of mental health history
- Current and previous treatment and woman’s views about treatment
- Risk history
- Previous pregnancies/children
- Woman’s thoughts about current pregnancy / baby
- Woman’s own experience of being parented
- Discuss risk of relapse in pregnancy and postpartum period
- Discuss risks and benefits of medication in pregnancy/lactation (could add list of issues to consider in this discussion)
- Discuss (if appropriate) referral to Children’s Social Care
- Discuss services which will be involved, importance of joint working and how information will be shared
- Contraception
7) Ongoing perinatal mental health care during pregnancy

8) Perinatal Care Plan

- Should be written collaboratively with the pregnant woman
- Should very briefly highlight the main problems/needs and risks.
- Should incorporate the views of the woman’s partner, family and carers.
- A copy should be sent to the woman for her handheld maternity records.
- Copies should be sent to all involved professionals and included in all versions of the woman’s notes (maternity, primary care, mental health)
- Should include the diagnosis, current treatment, problems, needs and risks.
- There should be a clear plan for women who do not attend (DNA)
- Should include a plan including the following:

(a) Pregnancy
- Frequency of contact with professionals
- Antenatal care
- Psychotropic medication
- Psychiatric admission
- Concern regarding likelihood of unattended delivery and plan to address this.
- Liaison with other services e.g. substance misuse
- Need for pre-birth planning meeting

(b) Admission to maternity unit at time of delivery
- Changes to psychotropic medication / new medication immediately post delivery
- Whether woman can breastfeed on medication
- The need for an RMN or HCA on the postnatal ward.
- Request for woman to have side room on the postnatal ward
- The need for the perinatal mental health team to be informed of delivery and review the woman before discharge from the maternity unit.
- The need for paediatricians to be aware of potential complications resulting from exposure to psychotropic medication in utero.
- The professionals who need to be contacted before discharge from the maternity unit.
- Child Protection Plan e.g. can woman be alone with baby on postnatal ward; social services department to be alerted
- Contact numbers for perinatal mental health team / duty psychiatrist
- Professionals to be contacted prior to discharge
(c) **Postnatal**
- If discharged home, plans for monitoring of mental state closely if high risk of relapse of SMI. Professionals who may be involved in monitoring mental state postnatally may include Community Mental Health Team, Home Treatment Team and Perinatal Mental Health Professionals
- Medication
- Plan for what the mother or her family should do if they have concerns about her mental health
- Mother and Baby Unit admission—elective/acute
- Parenting assessment
- Admission to an Acute Psychiatric Ward
- Role of professionals
- Child Protection Plan
- Information about local postnatal support
- Practical support

(d) **Crisis plans**

(e) **Contact details of all professionals**

9) **Pre-birth perinatal mental health planning meeting**

- The following people should be invited (and minutes of meeting circulated to them):

  The woman, her partner, and other family members she wishes to involve.

  The following professionals, if involved

  - CMHT Care-coordinator
  - Midwife
  - Health visitor
  - Perinatal Mental health professionals
  - Social worker for unborn baby
  - Obstetrician
  - CMHT Consultant
  - CAMHS professionals
  - GP
  - Substance Misuse Service
  - Domestic violence service
  - Other voluntary organisations
  - Interpreter
  - Independent advocate

- The following should be discussed:

  a. A thorough review of the past history based on a review of all the previous mental health records. This should include:

     - Past psychiatric history including diagnosis, admissions, postnatal episodes of illness
     - Treatment history including medication (duration of treatment, response, side effects and compliance) and psychological therapies
     - Engagement with mental health services
• Engagement with other services e.g. social services
• Level of functioning when well
• Drug and alcohol history
• Forensic history
• Any previous parenting or child protection concerns
• Relapse signature
• Risk indicators.

b. Current mental state and level of functioning.

c. Current psychiatric treatment and adherence.

d. Current drug or alcohol abuse.

e. Risk assessment
   • Consider past, current and future risks
   • Consider risks to unborn baby, other children, self, other adults.
   • Consider pregnancy related issues e.g. risk of untreated illness resulting in poor antenatal care; implications of impulsive behaviour on unborn baby / children
   • Consider risk related to lack of insight and compliance
   • Child protection concerns.

f. Pregnancy details
   • EDD
   • Previous pregnancies (including previous attendance for antenatal care)
   • Hospital booked for antenatal care
   • Planned / unplanned
   • Attitude to pregnancy
   • Consideration re place of birth (e.g. concerns / risks around home birth)
   • Attendance for antenatal care appointments
   • Known fetal complications.

g. Other children
   • main carer
   • any concerns
   • Children’s Social Care involvement or need for referral.

h. Quality of current relationship.

i. Other social support.

j. Antenatal education classes, breastfeeding support, parenting classes, voluntary sector pregnancy and parenting groups and courses.

k. Current accommodation.

l. Education (for school age women)

m. Asylum / immigration issues.

n. Family’s understanding of illness and relapse signature.
o. Need for Mother and Baby Unit admission – elective / acute.

q. Clarify whether referral to Children’s Social Care has been discussed and /or sent. Clarify stage of social services assessment process. This will ensure a Pre-birth Child Protection Conference is arranged sufficiently early (N.B. London Child Protection Procedures recommend this should be held 10 weeks prior to the expected delivery date). If a decision has been made that referral to Children’s Social Care is not necessary then the rationale for this decision must be documented

r. Clarify roles of professionals

10) MBU admission – link to MBU protocol
   - Prophylactic admissions for women at high risk of postpartum relapse
   - Admissions for treatment from 32 weeks gestation to 12 months postnatal
   - Parenting assessment - funded by the Local Authority.
   - A&E staff, Home Treatment Teams, and other mental health services, to have low threshold for considering MBU admission.

11) Discharge summary to include:
   - Current mental state
   - Risk assessment
   - Advice regarding future pregnancies
   - Contraceptive advice
   - Safeguarding concerns
   - Concerns re mother-infant interaction or care of children
   - Copy to all involved professionals
Appendix 1
PARENT-INFANT MENTAL HEALTH SERVICE LINE STRAND- Notes

- This pathway refers to infants from birth to 12 months
- Tiers are defined according to scores on the Parent-Infant Relationship Global Assessment Scale (PIR-GAS), a scale from the Diagnostic Classification of Mental Health and Development Disorders of Infancy and Early Childhood (DC: 0-3). National Centre for Infants, Toddlers and Families. Washington DC.
- The interventions available in the tiers described above are not mutually exclusive and parents may receive interventions that are available across two tiers.
- ‘Evidence-based’ is defined as an intervention that has shown consistent clinical effectiveness (a significant improvement in parenting, sensitive interactions, attachment or infant behaviour) in at least one randomised controlled trial. In the case of family therapy, evidence was only found for its effectiveness in improving sleeping and eating difficulties.
- **Staff teams.** It is recommended that teams should be formed based on practitioners’ clinical skills and their ability to provide the most evidence-based interventions. It is therefore recommended that staff are recruited into generic posts – ‘parent-infant mental health practitioner’ which reflect a range of seniority (i.e. 1 x band 6, 1x band 7, 1x band 8 and a consultant post). At least one member of staff should have an intensive outreach role to engage families in the community. Clinical backgrounds that might fit these posts include Child Psychiatrists, Clinical Psychologists, Parent-infant Psychotherapists, therapeutically trained Nurses and Social Workers, Child Counsellors and Systemic Family and Couples Therapists.
